

Connectable Lights

HELP GUIDE

lights4fun

A) IDENTIFY

MY LIGHTS WON'T WORK...

If your lights are not working, it's usually one of the following examples...

BULBS OUT
BULBS FADING
DIMMING/FLICKERING

B) DIAGNOSE

THE CONNECTION INSPECTION

In order to identify why your lights won't work, you need to diagnose where the problem lies. There may be an issue with a connection between the sets, or the power source.

STEP 1:
Disconnect your sets of lights from each other and the power source.

STEP 2:
Ensure every connector is dry. If moisture exists, allow to dry completely before moving to step 3.

STEP 3:
Connect each set to the power source individually and switch on.

Now you've diagnosed your lights, you can move to stage C.

C) ACTION

THE NEXT STEPS

All light sets work individually with the power source?

Check for visible wiring damage along your sets. Connect all sets together ensuring each connection is dry & tightened fully. Your lights are ready for use again.

Some or none of the light sets illuminating?
